Re: 123 Security Control Center Site Revisions

Dear Ev:

Per our discussion on 26 March 1987, we want to proceed with the sidewalk extension and the bus shelter as shown in your letter of 13 March. Revision of the visitor curb lane and installation of a sliding glass window for the visitor guardbooth should be placed on hold at this time. We have received indications that the component responsible for operating the Visitor Control Center (VCC) may request an additional visitor processing booth. If this is the case, we will proceed with all modifications at one time.

We reviewed the proposed bus shelters and selected the unit manufactured by Urbanco, model SVG-4M-W. Our Sweets Catalogue did not have detail on shelter bases/legs. We would prefer the color that most closely matches the color of the VCC. The shelter should have benches and lighting. The location of the bus shelter as shown in your sketch of drawing 2-C3-8 is acceptable.

Sincerely,

STAT
